Projects

- **Amazon clone:**
The frontend project of an Amazon clone involves replicating the user interface design of Amazon's website using HTML, CSS, and JavaScript. It includes features such as product listings, search functionality, cart management, and checkout process emulation. The project aims to mimic the look and feel of Amazon's frontend while integrating essential functionalities for a seamless user experience.
- **Sneakers website clone:**
Developed a fully functional clone of a popular sneakers e-commerce website, providing an immersive and user-friendly shopping experience. The project involves HTML, CSS and JavaScript. It provides Navigation, searching functionality, Filtering options and ensure that website is optimized for various devices, including desktops, tablets and smartphone.

Soft Skills

- Team management
- Quick learner
- Decision making
- Ability to communicate effectively with others
